

16TH ANNUAL MEETING OF THE BELGIAN STATISTICAL SOCIETY

Wépion-Namur, (15) 16-17 October 2008

The 2008 meeting will focus on statistical methodology and its applications in various fields of the society. It aims at reflecting the diversity of interests of the Belgian statistical community. During the two days of the conference, methodological and applied sessions will be organised in parallel. Examples of topics are: classification, Bayesian statistics, biometrics, biostatistics, computational statistics, data mining, epidemiology, semi- and nonparametric statistics, statistics in business and industry, survey and sampling. Your topic of interest may enrich the diversity of the program!

The 2008 young statistician afternoon will emphasize the importance of supporting young statisticians by offering them a special afternoon before the meeting and by giving most of them the possibility to present their work through a poster or an oral presentation.
