

We have a new position for a Senior Biostatistician that has opened with one of our client based in the Netherlands offering the possibility to be based in Amsterdam or to work from home (in the Netherlands). This role is a permanent position that would suit an enthusiastic individual seeking a new challenge in the industry.

They are looking for a Biostatistician with at least 5 years' experience in statistics applied to clinical trials in Pain or Urology studies (although doesn't have to have 5 years in these TA's)

In terms of responsibilities, the Biostatistician will:

- Work on the statistical methods sections of protocols and review case report forms
- Perform protocol development, sample size calculation, protocol and CRF review
- Prepare analysis plans and write specifications for analysis files
- Coordinate the development of analysis plans, table shells, programming and table specifications, the production of tables, listings and figures, data review and statistical analysis
- Write statistical sections of integrated reports
- Maintain constant communicate with clients regarding study protocol or statistical analysis issues
- Communicate with study team members regarding study execution as it relates to timelines, data quality, and interpretation of results. Interpret analyses and write statistical sections of study reports.

The selected candidate will have the following profile:

- Maser or PhD in Biostatistics/Statistics/Mathematics or equivalent
- At least 5 years' experience in statistics applied to clinical trials
- Demonstrated SAS Knowledge
- Fluent in English
- Significant experience with Pain or Urology therapeutic areas
- Demonstrated experience with production and QC of Tables, Listings, and Figures
- Experience with submissions is an asset
- Excellent communication skills
